

COMPUTERISED DECISION SUPPORT AND DEMENTIA

Alan Davis
Northland DHB

Background

- ▣ 2012 – MOH requires every DHB to be working on dementia pathways
- ▣ 2013 – MOH requires every DHB to implement pathways
- ▣ 2014 – MOH requires primary care education on dementia pathways

What we do

Legislation and regulation

New Zealand Guidelines Group

The New Zealand Guidelines Group (NZGG) was an independent, not-for-profit organisation, set up in 1999 to promote the use of evidence in the delivery of health and disability services. The NZGG went into voluntary liquidation in mid-2012.

The NZGG created evidence-based guidance, useable tools and implementation approaches. They also promoted the use of evidence in clinical and personal practice.

This page provides links to their evidence-based publications, all of which are now available on this website. Other NZGG publications, such as their annual reports, are available on the [Ministry library online catalogue](#).

Pathways - dynamic

The screenshot shows the 'bestpractice' website interface. At the top left is the logo 'bestpractice' with the tagline 'DECISION SUPPORT FOR HEALTH PROFESSIONALS'. Below the logo is a navigation menu with buttons for 'Home', 'Features', 'News & Views', and 'Support'. The main content area features a green background with a close-up image of leaves. The text reads: 'FEATURED MODULE CVD Management. The CVD Management module calculates 5-year CVD Risk and then progresses to decision support for the management of this risk. NZGG recommendations are interpreted and applied to the individual patient. More info.' At the bottom right of the screenshot is the 'eACC18' logo.

Who should manage transient ischemic attacks? A comparison between stroke experts, generalists, and electronic decision support

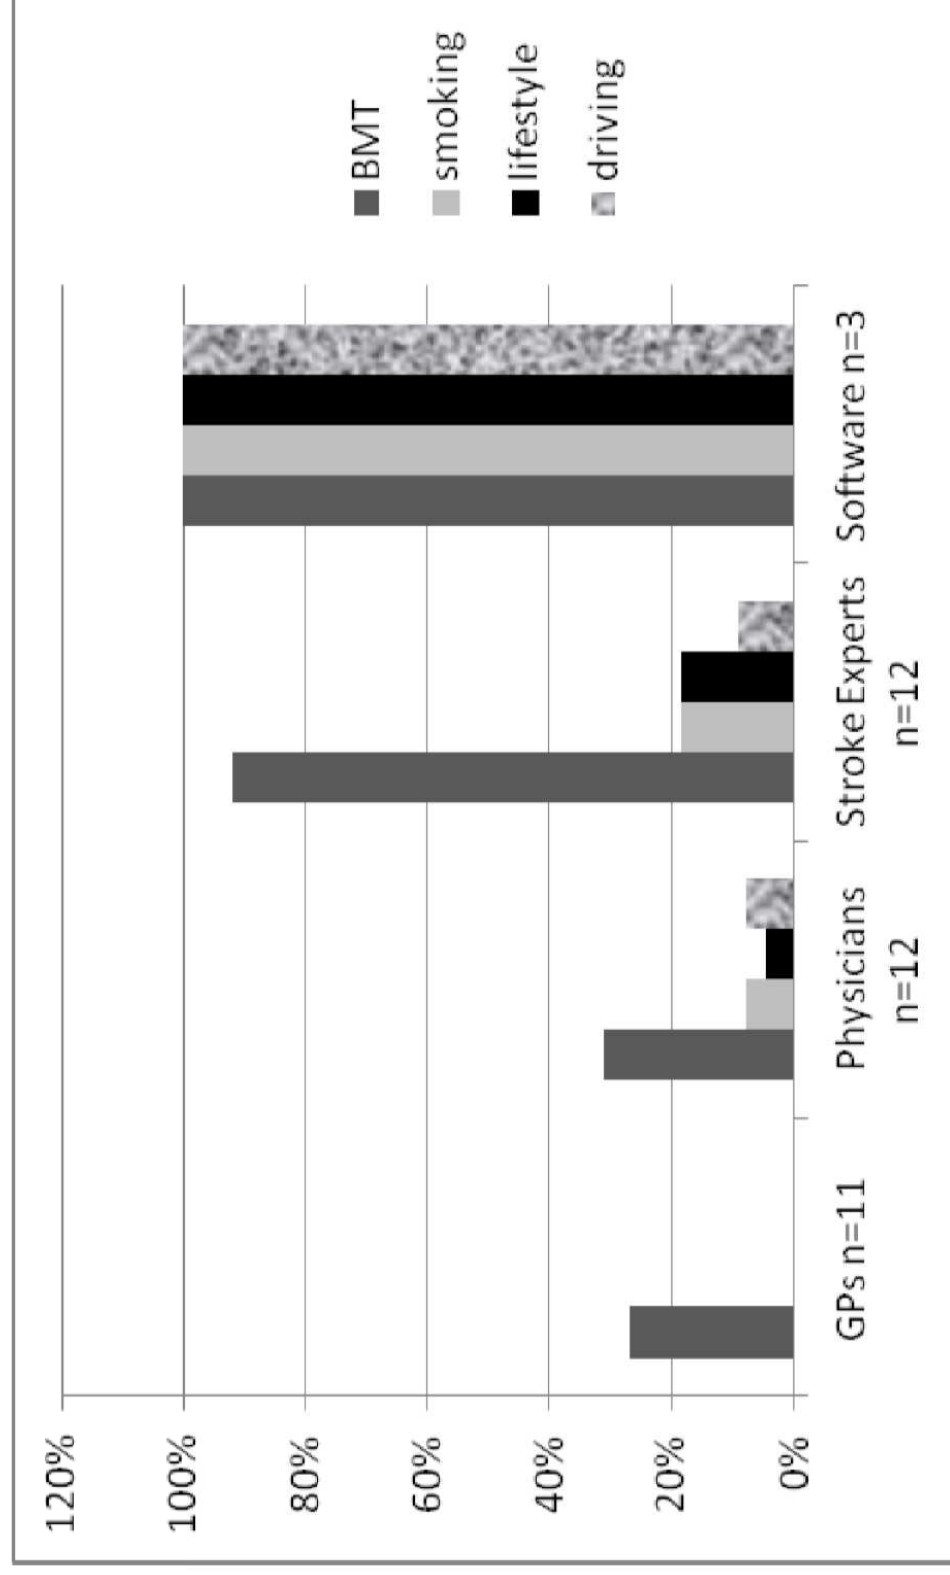

Annemarei Ranta, Pietro Cariga

Abstract

Aims Rapid expert management of transient ischemic attacks (TIA) has been shown to reduce the incidence of stroke, but is not always achievable. This study aims to demonstrate that TIA management by stroke experts is indeed more guideline adherent than that of generalists and that a TIA/stroke electronic decision support (EDS) tool closely mimics expert advice and improves guideline adherence.

Methods 11 general practitioners (GPs), 12 general physicians, and 12 stroke

Figure 3. Management consistency with New Zealand TIA Guidelines: GPs, general physicians, stroke experts, and EDS software

BMT=Best Medical Therapy; ‘smoking,’ ‘lifestyle,’ and ‘driving’ refers to whether need for counselling was mentioned.

Good CDS tools

- ▣ Makes right choices easier
- ▣ Gives confidence
- ▣ Transparent decisions making
- ▣ Integrate with workflows
- ▣ Easy access to useful resources
